

Exercise 4.05 - Application module

- This module is very similar to the "networking" module. The diagram on the slide is (hopefully) explanatory.

Quick help

- Use the [azurerm](#) documentation
- The suggested configuration for App Service Plan's SKU is
 - Tier = "Basic"
 - Size = "B1"
- The suggested configuration for App Service's site config is
 - dotnet_framework_version = "v4.0"
 - remote_debugging_enabled = true
 - remote_debugging_version = "VS2019"

Last step - Execute the deployment
