

Exercise 2.02 - Hello Azure!

Step 1 - Login to Azure

- For sake of simplicity, Azure CLI will be used. Use "az login" to perform authentication
- Go to the resource group page

Step 2 - Declarations

- In the main.tf file, make sure you update the Azure Resource Group declaration

```
resource "azurerm_resource_group" "_____" {  
  name      = "_____"  
  location = "_____"  
  
  tags = {  
    "_____" = "_____"  
  }  
}
```

Step 3 - Deployment

- Execute the following deployment steps:
 - terraform init
 - terraform plan
 - terraform apply
- Check the Azure resource group page and make sure the resource has been properly created
- Destroy the resource group via the "destroy" command
